Projects

BlocJams

Using AngularJS and jQuery I built a partial Spotify replica.

BlocChat

This real-time chat application was built using AngularJS, Firebase, and Bootstrap. Using AngularJS this app works in real-time communicating with Firebase listening devices.

Address Bloc

I used ruby to build a command line app that allows you to store all your contacts and search for them anytime.

PostEnvy

PostEnvy is a Reddit replica I built with Ruby on Rails and PostgreSQL. The application allows users to post content, favorite, vote, and comment on posts.

Omniwiki

Omniwiki is a wikipedia replica built on Rails using PostgreSQL incorporating the devise gem for authentication and the Pundit gem for authorization. Using devise I allow users to sign up for accounts and Pundit allows me to give them assign users different levels of account authorization such as standard, premium, and admin.

Kele

Kele is a ruby gem I built that works with the Bloc api that gives mentors and students access to their account information.

Markshare

Markshare is a bookmark sharing application built with rails.
